Super Questionnaire from Dolphin Imaging

Super Questionnaire is a multi-platform feature that allows practitioners to securely share questionnaires, medical history, informed consent, and other standard forms across the internet using an iPad or workstation. It features a distinct interface for staff and patient, and works across Dolphin Imaging, Dolphin Management, AnywhereDolphin.com and Dolphin Mobile. The manufacturer claims that patients can fill out an online medical history form prior to an appointment, which can then be reviewed and finalised using an electronic signature. The Treatment Coordinator can use Super Questionnaire on an iPad during the examination. All data is accessible via Dolphin Letters, Patient Information, Treatment Card, and other relevant screens within Dolphin. Super Questionnaire is part of the Dolphin Letter System and is a free upgrade to customers on a current support contract.

AcceleDent System from OrthoAccel

The AcceleDent System is a simple, hands-free appliance used twenty minutes daily to accelerate orthodontic tooth movement. According to the manufacturer, the pulsating mouthpiece, clinically evaluated in a randomised, controlled and blinded study, demonstrated that gentle vibrations, in combination with standard orthodontics, can safely move teeth 38 to 50 per cent faster. The device works in tandem with all fixed and removable orthodontic appliances and is applicable for patients of all ages.

Clarity ADVANCED ceramic brackets

3M Unitek's new Clarity ADVANCED ceramic brackets are made from fine-grained translucent ceramic material, manufactured through an injection moulding process. Designed to blend

with the natural tooth colour and resist staining and discolouration over the course of treatment, they are small in size and profile to minimise soft tissue contact. Other features include a dome-shaped round corner design for patient comfort and a stress concentrator for consistent and reliable mesial-distal debonding, according to the manufacturer.

Click-It self-ligating bracket system from TP Orthodontics

Click-It is a self-ligating bracket system with a four-walled archwire slot that adjusts to varying wire shapes, sizes and treatment objectives. Key features include hidden tie-wings, fully concealed metal parts and personalised colour-matching technology. According to the manufacturer, brackets absorb wavelengths of light so only the natural tooth colour shows.

M1 cast buccal tubes from Dentaureum

Dentaureum's new M1 cast buccal tubes (now available in MBT and Roth) are a wider version of Dentaureum's mini buccal tubes but with an improved funnel for easier insertion of the arch wire. The manufacturer claims that a patented laser base provides twice the bonding strength of similar products with mesh bases.
